

Information technology is a tool that is interwoven through a child's learning process at the New Life Christian Academy & Preparatory School. Technology is not to be used as a crutch, but to enhance learning. New Life Christian Academy & Preparatory School has a computer lab and laptops available to students. Other tools, from DVDs to graphic calculators are used to facilitate the learning process. Students are taught not just how to use technology, but why and how technology works. At the New Life Christian Academy & Preparatory School, technology is not a substitute for critical thinking. Nor is extensive time spent learning programs that will be quickly obsolete. Instead, we focus on traditional curriculum and enhance our learning with technology.
